

# ERP for General Manufacturing Industry

## Modules of Link3 ERP

## Link3 ERP Description

### Strengths of Link3 ERP

Link3 has developed an Industry-standard Enterprise Resource Planning (ERP) software solution in collaboration with Infopac of India. The solution has been customized to meet the requirements of local business environment. Link3 ERP is designed using the most advanced technology and best business practices in Bangladesh Business Environment. Following are some strengths of the Link3 ERP solution:

- Proven solid standards of Infopac
- Customized for local business practices
- Highly scalable & flexible
- Source code available
- Excellent support facility

### Modules of Link3 ERP

The modules of Link3 ERP seamlessly integrate with each other to eliminate multiple entries, while providing the necessary logical modularity to ensure optimum utilization of system resources.

#### Human Resource Management

This module of Link3 ERP manages all the Human Resource Functions including personnel management, payroll management, recruitment management, promotion, transfer, income etc. Link3 ERP makes it easy to keep accurate personnel records and documents of actions like hiring, promotions, reviews or terminations, and also gives you flexible options for tracking attendance and interfacing with your payroll package.

#### Inventory Management

This module provides the ability to maintain and report information relating to inventory activity, status and cost. This information includes summary totals at the inventory item level and detail

information on the individual open order that make up the total picture of availability and demand, by Locations from building, warehouse, zone, etc. A complete audit trail of every stock movement is maintained for research and performance reporting.

#### MRP (Production) Management

The Material Requirements Planning (MRP) system is the primary tool for creating and monitoring the production and inventory control plan. The operational objectives of MRP include reduced inventory investment, better direct labor utilization (reduction of time lost due to material shortage), reduced expediting costs and the introduction of a valid plan.

#### Accounts Receivable

The Accounts Receivable System provides for the recording and reporting of customer account activity & status. The overall objective of the Account Receivable system is to manage customer account activity accurately and reliably.

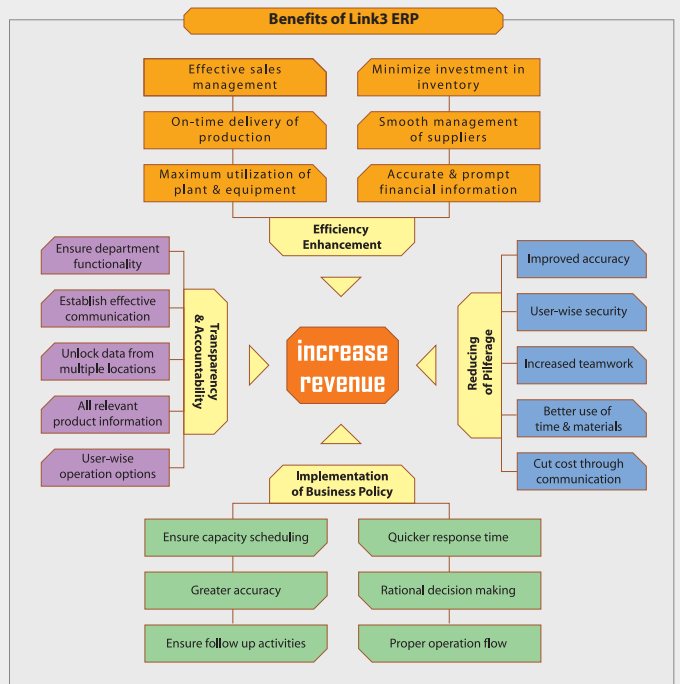

#### Accounts Payable

The Accounts Payable system provides for the recording and reporting of vendor account activity and status. The overall objectives of the AP system are to manage vendor account activity in a convenient, efficient manner and to optimize the cash flow.

#### General Ledger

The General Ledger System provides the user with the ability to maintain and report quantitative information about the financial status and activities of one or more companies. This information is intended to provide accurate, time sensitive data useful in making current economic decisions as well as plans for the future.

## Benefits of Link3 ERP

#### Fixed Asset Management

The fixed Asset Management System of Link3 ERP reduces the burden of accounting for the long-lived assets of a growing company. This module defines evaluation logic for all fixed asset and calculates depreciation and value accordingly. It tracks the ownership, current assignment and location, as well as the utilization of each individual asset.

#### Purchase Management

The Purchase Management System essentially manages the receipts against purchase orders and facilitates control over the entire purchase process in an organization. Using the Purchase Management System one can create purchase orders, receive goods against purchase and keep track of pending purchase orders through a host of reports.

#### Sales Management

The Sales Management Module automates and monitors sales processing and generates associated billing invoices. This system can help monitor and track sales orders based on product, client or active sales-representative. Besides quick data processing, this module can also generate various types of up to the minute report which is indispensable for production planning, raw material procurement planning, monitoring targeted plan (i.e. how much yearly target has been achieved till now), historical data analysis etc.

#### Management Information System

The Management Information System (MIS) Module summarizes and presents enterprise-wide information. It gives easy access to the overall picture of the total enterprise.
